

BOTOX & DYSPORT

POST-CARE INSTRUCTIONS

Botox and Dysport are commonly used injectable treatments that prevent and improve the appearance of fine lines and wrinkles. They function to soften the harsh muscle movements that eventually cause creases in the skin. This is one of the few things we can do to prevent wrinkles.

It generally takes 4-7 days for the relaxer to work and another 7 days for the other untreated muscles to adjust.

In 2 weeks, if you have questions about your dosage or desired results, please call us to set up a re-check.

Temporary side effects may include headaches, minimal bruising and pinpoint needle marks. To help reduce bruising, we recommend avoiding NSAIDs (e.g. Advil, Aspirin, Aleve, and excessive alcohol intake) 2 weeks prior to your appointment.

For continued improvement and best results, we recommend injection treatments every 3 months.

Please, give us a call with any questions or concerns at 205-870-3303.
